

Net-Zero America - colorado state report

2021-03-15

These data underlie graphs and tables presented in the Princeton Net-Zero America study:

E. Larson, C. Greig, J. Jenkins, E. Mayfield, A. Pascale, C. Zhang, J. Drossman, R. Williams, S. Pacala, R. Socolow, EJ Baik, R. Birdsey, R. Duke, R. Jones, B. Haley, E. Leslie, K. Paustian, and A. Swan, Net-Zero America: Potential Pathways, Infrastructure, and Impacts, interim report, Princeton University, Princeton, NJ, December 15, 2020. Report available at https://netzeroamerica.princeton.edu.

Notes

- These data are all data from the study available at https://netzeroamerica.prince-ton.edu.
- The Net-Zero America study describes five pathways to reach net-zero emissions and one "no new policies" reference scenario. In this document, state-level results are grouped by scenario. For some scenarios, the study generated national, but not statelevel results.
- Within results for a given scenario, data tables are organized into corresponding sections of the full net-zero study (e.g., Pillar 1, Pillar 2, etc.)
- For Pillar 6 (Land sinks), values shown are maximum carbon storage potentials.

Data by category and subcategory

plantations (1000 tCO2e/y)							
Carbon sink potential - Mid - Increase							-116
retention of HWP (1000 tCO2e/y)							

Table 64: REF scenario - PILLAR 6: Land sinks - Forests (continued)

Item Copper sink notantial, Mid. Increase	2020	2025	2030	2035	2040	2045	2050
Carbon sink potential - Mid - Increase							-859
trees outside forests (1000 tC02e/y)							10 /7/
Carbon sink potential - Mid - Reforest							-18,676
cropland (1000 tC02e/y)							17/0
Carbon sink potential - Mid - Reforest							-1,742
pasture (1000 tCO2e/y)							,
Carbon sink potential - Mid - Restore							-4,092
productivity (1000 tC02e/y)							
Land impacted for carbon sink potential -							265
High - Accelerate regeneration (1000							
hectares)							
Land impacted for carbon sink potential -							211
High - Avoid deforestation (over 30 years)							
(1000 hectares)							
Land impacted for carbon sink potential -							4,708
High - Extend rotation length (1000							
hectares)							
Land impacted for carbon sink potential -							9.89
High - Improve plantations (1000							
hectares)							
Land impacted for carbon sink potential -							0
High - Increase retention of HWP (1000							
hectares)							
Land impacted for carbon sink potential -							121
High - Increase trees outside forests							
(1000 hectares)							
Land impacted for carbon sink potential -							1,646
High - Reforest cropland (1000 hectares)							1,040
Land impacted for carbon sink potential -							92
High - Reforest pasture (1000 hectares)							72
Land impacted for carbon sink potential -							2,029
High - Restore productivity (1000							2,029
hectares)							
Land impacted for carbon sink potential -							9,083
							9,003
High - Total impacted (over 30 years)							
(1000 hectares)							100
Land impacted for carbon sink potential -							133
Low - Accelerate regeneration (1000							
hectares)							400
Land impacted for carbon sink potential -							198
Low - Avoid deforestation (over 30 years)							
(1000 hectares)							
Land impacted for carbon sink potential -							1,804
Low - Extend rotation length (1000							
hectares)							
Land impacted for carbon sink potential -							4.95
Low - Improve plantations (1000							
hectares)							
Land impacted for carbon sink potential -							0
Low - Increase retention of HWP (1000							
hectares)							
Land impacted for carbon sink potential -							63.7
Low - Increase trees outside forests							
(1000 hectares)							
Land impacted for carbon sink potential -							823
Low - Reforest cropland (1000 hectares)							
Land impacted for carbon sink potential -	+	-			+		15.9
Low - Reforest pasture (1000 hectares)							10.7
Land impacted for carbon sink potential -							1,228
Low - Restore productivity (1000							1,220
hectares)							

Table 64: REF scenario - PILLAR 6: Land sinks - Forests (continued)

Item	2020	2025	2030	2035	2040	2045	2050
